SYSPRO Business Insights

SOLUTION FACTSHEET

Today, business success is increasingly reliant on strategic planning and management. However, there tends to be a disconnect within organizations when trying to align big picture strategy elements with operational areas, workstations, KPI's and measures to improve business performance.

What manufacturing and distribution companies increasingly need is a vehicle that not only drives strategy throughout the organization, but one that provides actionable insights to follow through on that strategy. However, most ERP reporting and analytics tools only offer retrospective insights and don't provide users with the means and insights to take immediate action.

Business Insights is an individual performance management tool for all levels of engagement. It provides real-time insight into key performance information and the means to act quickly and proactively.

Operational Stream Owners and decision makers have greater control in driving the business behavior that will lead to improved business performance. With immediate visibility of individual and departments across the entire operation and with the flexibility to define operational goals, targets and deadlines at an individual, role or organizational level, Business Insights provides the means to convert KPI's into meaningful improvement.

By surfacing relevant information pertinent to specific individuals and roles, Business Insights empowers these individuals within an organization to meet goals, targets and deadlines, collaborate with others, and perform to their full potential. All while measuring their own KPI's and managing their own work-lists.

Product Version:

SYSPRO 8

Sectors:

Manufacturing and Distribution

Industries:

- Automotive Parts and Accesories
- Electronics
- Fabricated Metals
- Food and Beverage
- Industrial Equipment and Machinery
- Packaging
- Plastics and Rubber

The benefits of Business Insights:

Improve business performance and drive business behavior by empowering your users with business-critical insights for quicker analysis, decision making and execution.

Accelerate turnaround time

Accelerates turnaround time by streamlining the actions and activities that occur between one task and the next in a business process. By promoting that information, that is most pertinent to that person in their role within the process, users are empowered to take action – driving throughout.

Increase decision-making capability

Make proactive business decisions with increased visibility into operational performance of the company by individual and department across the entire operation and determine where you are successful and where you need to improve.

The benefits of Business Insights (continued):

Improve business performance

Improve performance by defining and assigning operational goals, targets and deadlines at an individual, role or organizational level as key performance indicators and metrics designed with the ability to immediately action work-to-lists – converting KPI's into meaningful improvement.

Empower the workforce

Empower users to perform to their full potential and to meet goals and targets by assigning insights in an intuitive, self-explanatory, easy-to-use interface, aligned with critical business drivers and work- lists to be actioned.

Business Insights features:

Single real-time view

Provides a single real-time view into key business drivers of the company by individual and department across the entire operation.

Surfaces relevant key performance information

An easy to use, self-explanatory and intuitive interface that surfaces key performance information that is relevant to the individual, department or organization.
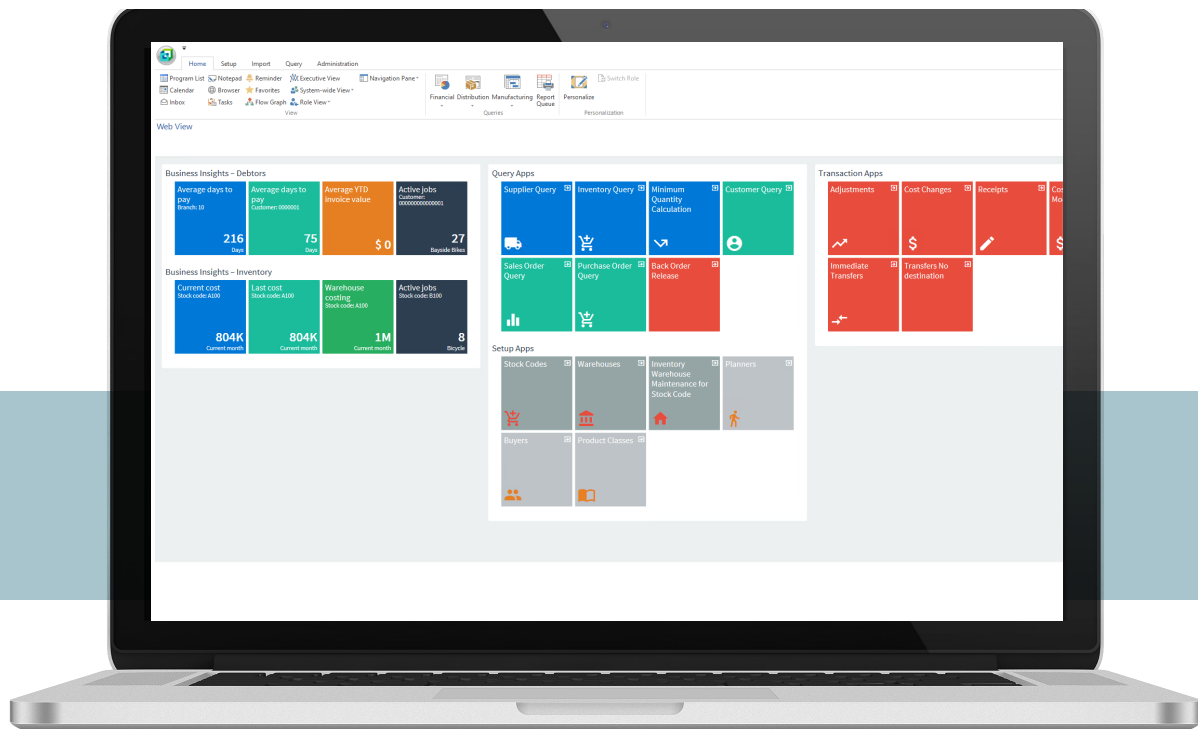

Drill-Down capability

Drill down into insights and the detail behind each metric by individual role or department.

Pre-configured to standard business metrics

Pre-configured, standard insights, built according to industry specific KPI's and metrics.

Flexible and customizable metrics

Flexible and customizable to allow organizations to consolidate information from multiple sources, script their own views and establish their own monitoring and goal
